How You Grew

Sequence How You Grew

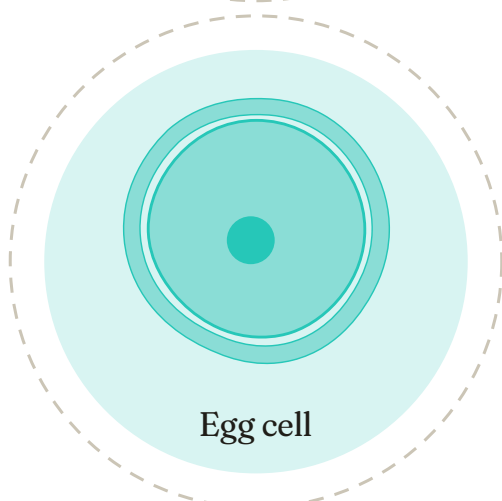

8 cards · 2 playboards · Ages 2+

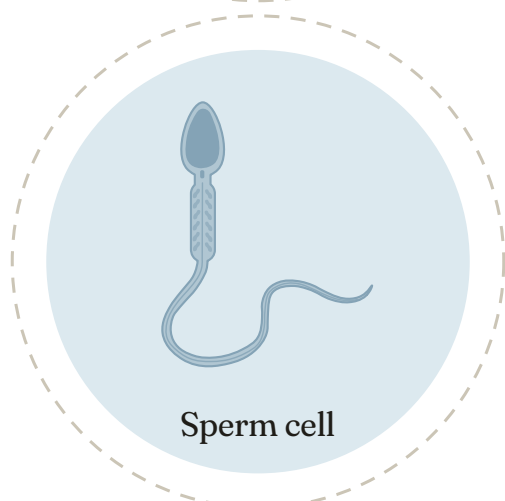

Two cells

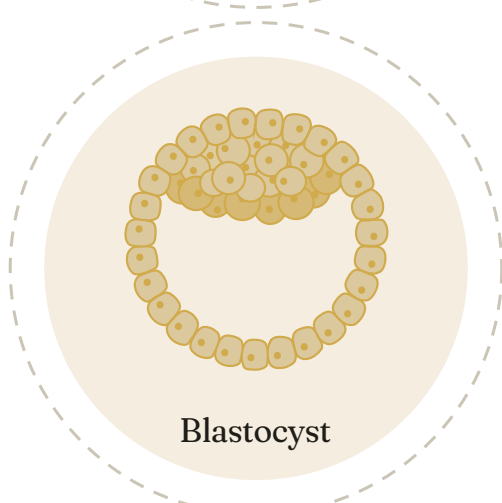

Embryo

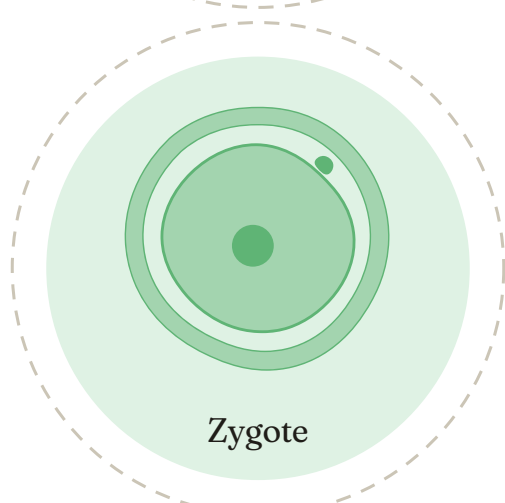

Egg cell

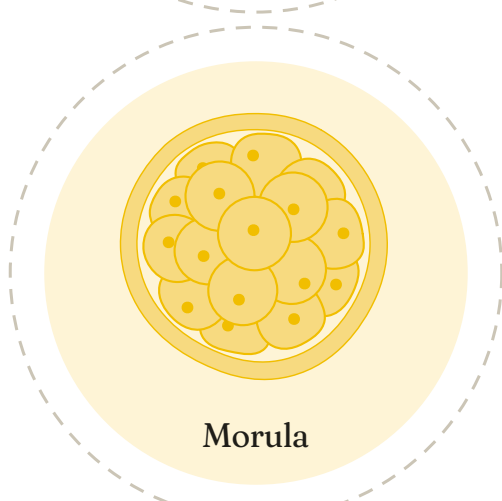

Sperm cell

Blastocyst

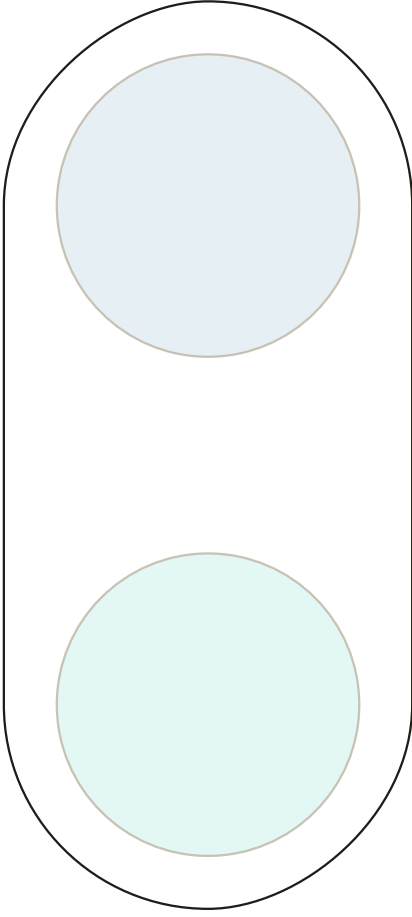

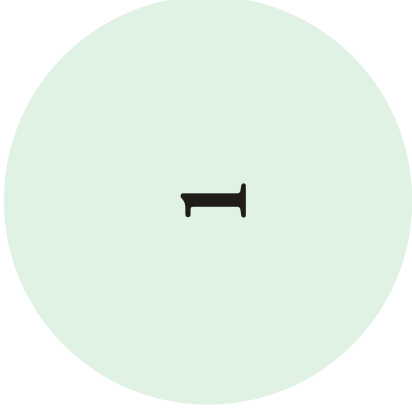

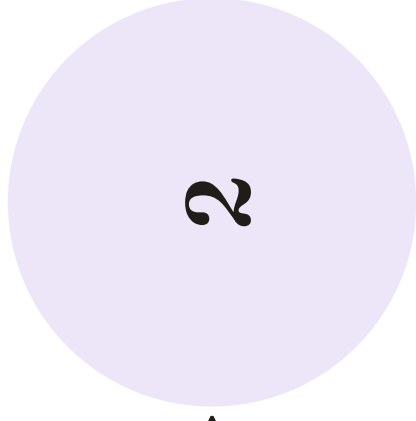

Zygote

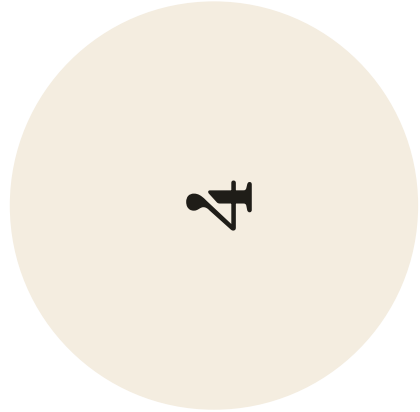

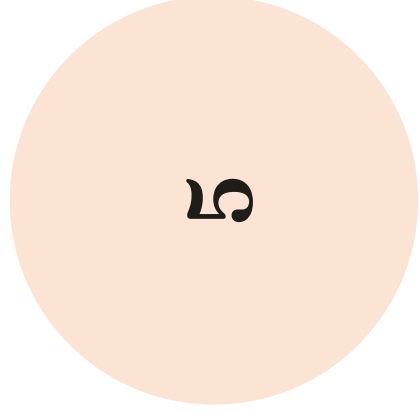

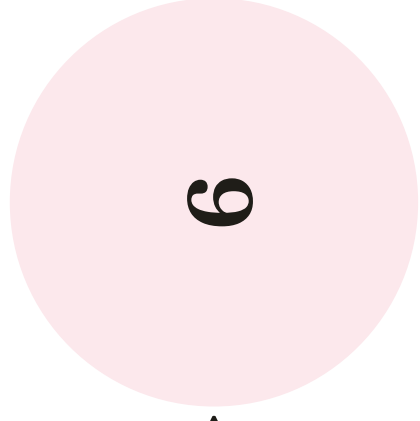

Morula

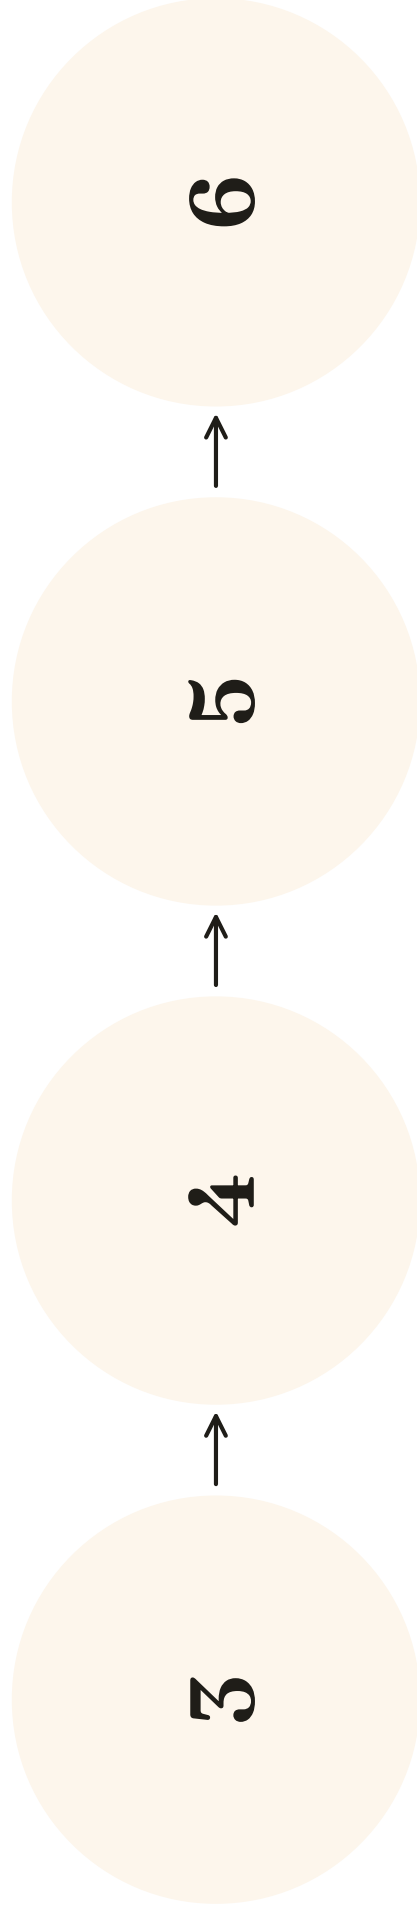

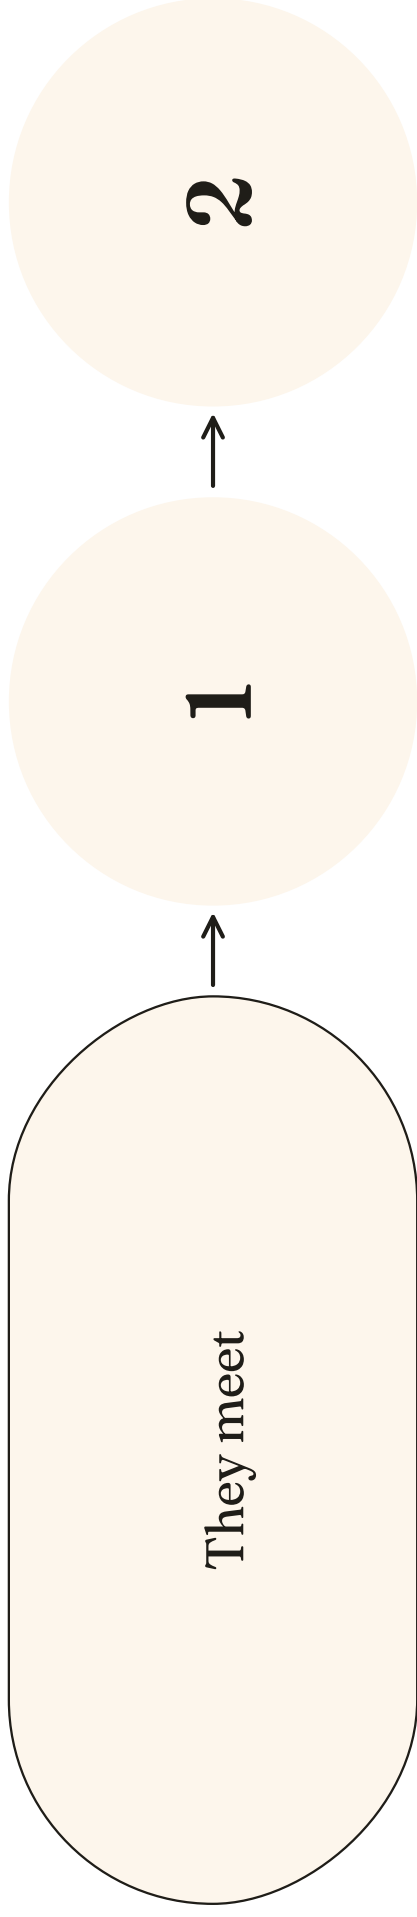

Baby

They meet

How to play

1. Print

Print the cards page and one or both playboards.

Use thick paper or card stock for best results.

2. Cut

Cut out the 8 circular cards along the dashed lines.

3. Play, colour match

Use the colour playboard. Each slot is coloured to match the card that goes there. Put the egg and the sperm in the first slot together, then follow the arrows from 1 to 6.

4. Play, full sequence

Use the plain playboard. Put the egg and the sperm in the first slot, then place the rest on their numbers, in the order it happens, from one cell to a baby.

About the first slot

The first slot holds two cards, not one. The egg and the sperm are not two steps in a row — they are two halves that meet, and the zygote is what they make together. Everything after that is one thing becoming the next.

Tip

Laminate the cards and playboard for endless reuse. Check the Parent's Cheat Sheet for what happens at each stage.
